“Thermal Imaging & Building Science”
Two Day Course - 16 Hours - Cost: \$500

Thermal Imaging and Building Science

Like any new tool, one must learn how to use it properly, to properly interpret what it is telling you and to understand its applications and limitations.

This course is intended to prepare the Home Inspector to properly use a Thermal Camera with regards to home inspections.

There will be sections on the theory of electromagnetic radiation, thermodynamics and building science.

There will also be examples of field use of the camera and how to properly interpret the images that are produced.
