

Dave Gaston

I got a very minor Engineering degree (which I have never used) Before I became an apprentice electrician in 1981 and got my 16th Edition Electrical qualification in 1985, when I also got my City and Guilds 2391 which is Inspecting and testing. I have been a commercial/ industrial electrician ever since with 4 year brake when I work on the Railway in England maintaining signaling systems.

I have been in Colorado since 2005 and have worked as a Commercial/Industrial electrician on things like, the Airforce Accademy, Gambro medical systems(installing their clean room) And Whole foods. I've also been involved in remodels on stores like King Soopers, and of course I'm a Certified Master Inspector.
