

What is a home inspection and why is it necessary?

Buying a home is probably the largest investment you will make. It is important to know the overall condition of your investment.

A home inspection is a non-invasive, visual examination of a residential dwelling. It is intended to assist in the evaluation of the overall condition of the home. The inspection is based on observations of the visible and apparent condition of the structure and its components. Included in the inspection report is information on any material defects observed on the date of the inspection.

State-Licensed and Certified Professional Inspector®

- State of Florida License #HI4468
- Member in good standing of the International Association of Certified Home Inspectors (InterNACHI)
- IAC2-Certified for mold testing by the International Association of Certified Indoor Air Consultants

- Trained & Experienced
- Independent & Impartial

Exterior

I will inspect:

- the siding, flashing and trim;
- all exterior doors, decks, stoops, steps, stairs, porches, railings, eaves, soffits and fasciae;
- the vegetation, surface drainage, and retaining walls when these are likely to adversely affect the structure;
- and report as in need of repair any spacing between intermediate balusters, spindles and rails for steps, stairways, balconies and railings that permit the passage of an object greater than 4 inches in diameter;
- the type and condition of a representative number of windows;
- and describe the exterior wall covering and its condition.

Fireplace

I will inspect:

- the fireplace, and open and close the damper door, if readily accessible and operable; and
- the hearth extensions and permanently installed components;
- and report as in need of repair deficiencies in the lintel, hearth or material surrounding the fireplace, including the fireplace opening's clearance from visible combustible materials.

Roof

From the ground level or eaves, I will inspect:

- the roof covering's condition and type;
- the gutters;
- the downspouts;
- the vents, flashings, skylights, chimney and other roof penetrations; and
- the general structure of the roof from the readily accessible panels, doors or stairs.

Included in a Home Inspection

Electrical

I will inspect:

- the service drop/lateral;
- the meter socket enclosures;
- the means for disconnecting the service main;
- and describe the service disconnect amperage rating, if labeled;
- the panelboards and over-current devices (breakers and fuses);
- the service grounding and bonding;
- a representative number of switches, lighting fixtures and receptacles, including receptacles observed and deemed to be AFCIs;
- and test all GFCI-protected receptacles and circuit breakers observed and deemed to be GFCIs;
- service entrance conductors and conductor insulation; and
- service entrance cables.

I will report on:

- any unused circuit breaker panel openings that are not filled;
- the presence of solid-conductor, aluminum branch-circuit wiring, if readily visible;
- any tested receptacles in which power was not present, the polarity was incorrect, the receptacle was not grounded or secured to the wall, the cover was not in place, the GFCI devices were not properly installed or did not operate properly, and evidence of arcing or excessive heat;
- the presence of smoke detectors; and
- any deficiencies in the integrity of the insulation, drip loop, or separation of conductors at weatherheads and clearances from grade or rooftops, as they may require repair.

Attic, Ventilation & Insulation

I will inspect:

- the insulation in unfinished spaces;
- the ventilation of attic spaces; and
- the mechanical ventilation systems;
- and report on the general absence or lack of insulation in unfinished spaces.

Plumbing

I will:

- determine whether the water supply is public or private;
- verify the presence of and identify the location of the main water shut-off valve;
- inspect the water heating equipment, including venting bracing, and verify the presence or absence of temperature- and pressure-relief valves and/or Watts 210 valves;
- flush toilets;
- water-test sinks, tubs and showers for functional drainage;
- inspect the interior water supply, including all fixtures and faucets;
- inspect the drain, waste and vent systems, including all shut-off valves and fixtures;
- describe any visible fuel storage systems;
- inspect drains and sump pumps and test pumps with accessible floats;
- inspect and report as in need of repair deficiencies in the water supply by viewing the functional flow in two fixtures operating simultaneously;
- inspect and report as in need of repair deficiencies in the installation and identification of hot and cold faucets;
- inspect and report as in need of repair mechanical drain stops that are missing or do not operate if installed in sinks, lavatories and tubs; and
- inspect and report as in need of repair commodes that have cracks in the ceramic material, are improperly mounted on the floor, leak, or have tank components that do not operate.

Heating & Cooling

I will inspect:

- the heating system, using normal operating controls, and describe the energy source and heating method;
- and report as in need of repair a heating system that does not operate;
- and report if the heating system is deemed inaccessible; and
- the central cooling equipment, using normal operating controls.

Foundation

I will inspect:

- the foundation condition and type;
- the visible structural components;
- any wood in contact with or near soil;
- and report any present conditions or clear indications of active water penetration observed;
- and report any general indications of foundation movement that are observed, such as, but not limited to: sheetrock cracks, brick cracks, out-of-round door frames, or floor slopes;
- and report on any cutting, notching or boring of framing members that may present a structural or safety concern.

Doors, Windows & Interior

I will:

- open and close a representative number of windows and doors;
- inspect the walls, ceiling, steps, stairways and railings;
- report as in need of repair any spacing between intermediate balusters, spindles and rails for steps, stairways and railings that permit the passage of an object greater than 4 inches in diameter;
- inspect garage doors and garage door openers by operating first by remote (if available), and then by the installed automatic door control;
- report as in need of repair any installed electronic sensors that are not operable or not installed at the proper height above the garage floor;
- report as in need of repair any door locks or side ropes that have not been removed or disabled when the garage door opener is in use; and
- report as in need of repair any windows that are obviously fogged or display other evidence of broken seals.
