

FOR IMMEDIATE RELEASE

InterNACHI Approves Buildings Specialty Course for Continuing Education

February 8, 2008

The Snell Group is pleased to announce that the two-day Building Systems specialty course for infrared thermographers has been approved by the International Association of Certified Home Inspectors (InterNACHI) for the continuing educational needs of their members. InterNACHI members will receive 16 hours of Continuing Educational Units when they successfully complete any one of The Snell Group's two-day building infrared specialty classes being offered in select locations in the United States and Canada in 2008.

The two-day buildings specialty course provides an in-depth analysis of applying thermal imaging to building applications and is designed for thermographers who have first completed their Level I infrared (IR) training. Topics include IR fundamentals for buildings, residential inspections, large building scans, roof moisture inspections, special problems, other technologies, inspection methodologies and reporting procedures. A more complete course outline and details of upcoming classes in Phoenix, AZ, Indianapolis, IN, Toronto, ON, and Montreal, Quebec are available online at <https://www.thesnellgroup.com/CourseDetails.aspx?id=14>. The course can also be customized and delivered as an on-site.

The Snell Group is the world's leading expert on using Infrared Thermography (IR) and Motor Circuit Analysis (MCA) to reduce risk, increase uptime, save money, conserve energy and improve safety. They offer training, certification, inspection, consulting and information services for IR and MCA professionals and their programs world-wide.
